J.SH

The new expanded range of J.SH electronic in-room safes that we present in this new catalog, is the result of 30 years of research into Hotel requirements. We have proudly produced more than 1 million electronic safes, now in daily use at thousands of Hotels and Cruise ships around the world, in over 70 countries.

J.SH is fully dedicated to providing its customers with unparalleled service, logistics and flexibility. Our products are of the highest quality, yet cost effective and deliver optimum performance. Through our continuous technical support and long term partnering, we have become well recognized for our reliability, courteous service, strong back-up and have truly achieved an honest reputation in the international business world.

J.SH has manufactured innovative hospitality solutions for over three decades, and today we are the leading manufacturer and developer of unique and high quality electronic in-room safes. Our products boast the most impeccable design, thoughtful construction and elegant style. Our safes are supplied with the most intellectually powerful, yet user friendly security software.

MAIN FEATURES FOR ALL MODELS

- Custom made to the highest quality standards
- Simple intuitive operation by 4 to 6 digit pin code or credit card
- Six bold bright red, easy to read led display units
- ADA standard approved unique epoxy keypad
- 400 - event audit trail print - out using JSH Safe Logger Unit including who last operated the safe, and when (FLASH RAM memory)
- Double locking bolts, manufactured from chrome plated solid steel
- Trouble free maintenance, with automatic "battery low" message
- Various customizable programming functions
- Emergency opening and system management controled by the Safe Logger Unit (SLU), including self print audit up to the last 500 events, including who used the SLU, and when
- Buzzer indication for different functions
- Automatic inside light

WE OFFER YOU TO MAKE YOUR OWN CHOICE WITH 3 DIFFERENT LOCKING SYSTEMS

Series D

The D series is simple for guests to understand and use - there are no complex instructions. The safe is operated by a convenient 4-6 digit pin code, chosen by the user.

Series C

The C series is operated by the guests personal credit card. To lock the safe the user simply closes the door and slides his credit card through the slot (the guests can use up to 2 different, credit cards).
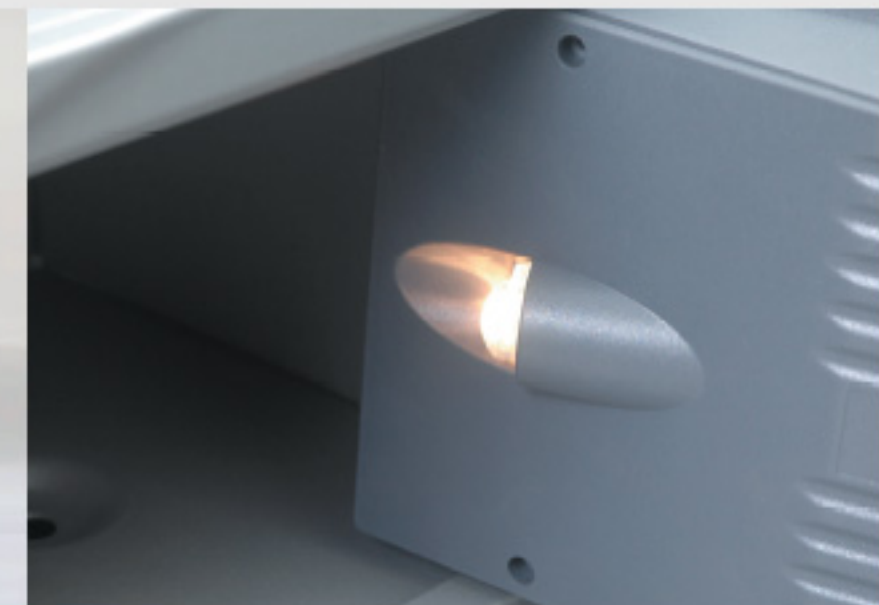

Series DC

The DC series is the most user friendly safe in our range. It offers dual locking systems, Where the user can choose to operate the safe either with his own credit card (up to 2 different cards), or with 4-6 digit pin code of his choice.

SEVENTY COUNTRIES WORLD-WIDE FOR MORE THAN THREE DECADES.

SUPREME™ SERIES

No other safe on the market can even closely match the new J.SH Supreme series, with its impeccable construction and contemporary style.

No other safe on the market can even closely match the new J.SH Supreme series with its powerful security software, and incredibly user friendly operation. The new Supreme series combines the best of our past models with cutting edge technologies of the present.

J.SH OVERRIDE AND AUDIT HANDHELD.

The state-of-the-art **Safe Logger Unit (SLU)** has been designed to open the safe in case of emergency and also to perform security management tasks. The SLU is a very easy unit to use and it has an interactive LCD light display with full operational instructions. If there is any suspicion of theft from a safe, the unit can detect and download the last 400 events from the safe, which includes the Hotel name, room number, employee's name and ID, date & time of each event and the date of the print out. This dramatically reduces fraudulent liability claims, saving you both time and money. All downloaded data can be viewed on the SLU screen at all times, and the SLU can be connected directly to a standard or POS printer to obtain a hard copy of the data.

The SLU can be programmed to work on a specific property, thus allowing each hotel to set their own Override codes, in order to open safes in emergency cases. The SLU allows 4 programming security levels in order to control the programming of the users. Different authorized users can then operate the SLU by setting their own codes.

The SLU unit includes a "self" audit memory up to the last 500 events on the SLU itself, including the user ID, time & date, room number and the type of events the user operated with the unit (like open safe, download data, changing programming etc.). This report is immune to power failure or attempts at deletion.
